## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-4 are rejected under 35 U.S.C. 102b as being anticipated by  
Carpenter et al. (5155787).**

Carpenter et al. teaches an optical connector for coupling one optical fiber wire with another optical fiber wire in physical contact, said optical connector comprising a receiving portion including a support region adapted to support an optical fiber wire along the axis of said receiving portion, wherein said axis of said receiving portion is offset from the axis of said optical fiber wire in a posture of being ready to be inserted into said receiving portion. (See: figs. 3, 4; Abstract). Thus claim 1 is met.

Carpenter et al. teaches the receiving portion includes a guide region which is provided at the end thereof and on an extension of the axis of said optical fiber wire in the posture of being ready to be inserted into said receiving portion, said guide region slanting in the direction to widen said receiving portion. (See: figs. 3, 4; Abstract). Thus claim 2 is met.

Carpenter et al. teaches an optical connector as defined in claim 2, wherein said support region is formed in a V-shaped section. (See: figs. 3, 4; Abstract). Thus claim 3 is met.

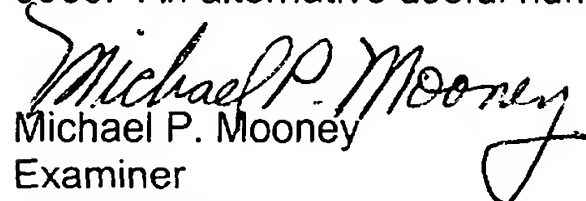

Carpenter et al. teaches an optical connector as defined in claim 1, wherein said support region is formed in a V-shaped section. (See: figs. 3, 4; Abstract). Thus claim 4 is met.
